DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Houf et al. [4,769,557] in view of Grant. [6,441,520].

Regarding claims 1 and 4, Houf et al. disclose a modular electric load controller [figure 1] comprising a case [30] constituting a body of controller; a plurality of power pins/terminals [36, 38] and signal pins [50] disposed adjacent to each of three edges on a surface of the case in a manner such that substantially a u-shaped arrangement is obtained along the three edges [figure 3a].

Houf et al. disclose the instant claimed invention except for: a power board located inside the case connected to the power pins/terminals and a signal board located inside the case and electrically connected with the signal pins/terminals and the terminals being pins.

Grant discloses a power module [2] having a power plane/board [4] connected to power pins/terminals [10a-c, 12a-e] and a signal board [8] connected to signal pins [16].

It would have been obvious to a person having ordinary skill in the art at the time invention was made to use the board design of Grant with Houf et al. for the purpose of interchanging the boards.

To use pins instead of terminals would have been an obvious to accommodate power connectors.

Regarding claim 2, Houf et al. shows a heat sink [16] connected to the module.

Regarding claim 3, Grant further shows the signal board [8] connected with the power plane [4, figure 4].

Regarding claim 5, Houf et al. shows the power module being connected to a motor.

Response to Arguments

Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2841

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
